A. Configuredatabase tags for the Opswork application layerOpswork application layer

B. ConfigureSSL so that the instance can communicate with the database
C. Addthe appropriate driver packages to ensure the application can work with thedatabase
D. Configuredatabase tags for theYou have defined a Linux based instance stack in Opswork. You now want to attach a database to the Opswork stack. Which of the below is an important step to ensure that the application on the Linux instances can communicate with the database
E. Addthe appropriate driver packages to ensure the application can work with thedatabase
F. Addanother stack with the database layer and attach it to the application stack.
G. ConfigureSSL so that the instance can communicate with the database
H. Addanother stack with the database layer and attach it to the application stack.
Answer: C
Explanation:
Explanation
The AWS documentation mentions the below point
Important
For Linux stacks, if you want to associate an Amazon RDS service layer with your app, you must add the appropriate driver package to the associated app server layer, as follows:
1. Click Layers in the navigation pane and open the app server's Recipes tab.
2. Click Edit and add the appropriate driver package to OS Packages. For example, you should specify mysql if the layer contains Amazon Linux instances and mysql-client if the layer contains Ubuntu instances.
3. Save the changes and redeploy the app.
For more information on Opswork app connectivity, please visit the below URL:
