Docs1 is ready to pay back if you fail exam.

NEW QUESTION: 1

Company employees are required to have workstation client certificates to access a bank website. These certificates were backed up as a precautionary step before the new computer upgrade. After the upgrade and restoration, users state they can access the bank's website, but not login. Which of the following is MOST likely the issue?

- A. The IP addresses of the clients have changed
- B. The certificates have been installed on the CA
- C. The certificates have not been installed on the workstations
- D. The client certificate passwords have expired on the server

Answer: C

Explanation:

Explanation/Reference:

Explanation:

The computer certificates must be installed on the upgraded client computers.

NEW QUESTION: 2

- A. Option C
- B. Option E
- C. Option D
- D. Option A
- E. Option B

Answer: A,C,E

NEW QUESTION: 3

- A. Option A
- B. Option C
- C. Option D
- D. Option B

Answer: A

Explanation:

APIPA stands for Automatic Private IP Addressing and is a feature of Windows operating systems. When a client computer is configured to use automatic addressing (DHCP), APIPA assigns a class B IP address from 169.254.0.0 to

169.254.255.255 to the client when a DHCP server is unavailable.

When a client computer configured to use DHCP boots up, it first looks for a DHCP server to provide the client with IP address and subnet mask. If the client is unable to contact a DHCP server, it uses APIPA to automatically configure itself with an IP address from a range that has been reserved especially for Microsoft. The client also configures itself with a default class B subnet mask of 255.255.0.0. The client will use the self-configured IP address until a DHCP server becomes available.
