B. True

Answer: B

NEW QUESTION: 3

ABC社のSANは容量に近づいており、サーバーのディスク領域が不足するとコストのかかるダウンタイムが発生します。新しいSANを購入するより費用対効果の高い方法は次のうちどれですか。

A. オフサイトデータセンターへのレプリケーションを実装する

B. スナップショットを実装して仮想ディスクのサイズを削減する

C. ストレージプールで重複排除を有効にする

D. マルチパスを有効にして可用性を向上させる

Answer: C

Explanation:

Storage-based data deduplication reduces the amount of storage needed for a given set of files.

It is most effective in applications where many copies of very similar or even identical data are stored on a single disk.

It is common for multiple copies of files to exist on a SAN. By eliminating (deduplicating) repeated copies of the files, we can reduce the disk space used on the existing SAN. This solution is a cost effective alternative to buying a new SAN.

NEW QUESTION: 4

A backup design requiring backups of all IBM Tivoli Identity Manager (Tivoli Identity Manager) related components (WebSphere, LDAP, database) to occur at midnight has been created. All Tivoli Identity Manager processes are quiesced for the duration of the backups. The backups run successfully, and Tivoli Identity Manager is restarted. During the night an identity feed runs, creating 1000 new employees. The identify feed specifies Use Workflow on the service definition and both a Tivoli Identity Manager account and an AD account are automatically provisioned for each person. Both services specify that noncompliance must be corrected. The related provisioning policies use UID from the person object for eruid on both services. An adoption policy exists for AD to search person objects for UIDs matching eruid during reconciliation. The identify feed and all of its provisioning operations are completed by 3 a.m. At 7 a.m., a catastrophic hardware failure occurs against the Tivoli Identity Manager LDAP and a restoration from the previous 12 a.m. backup must be performed. Which actions must be taken to recover the updates to LDAP that occurred during the identity feed and related provisioning activities?

- A.** Rerun the identify feed, disabling Use Workflow. Then perform reconciliation against the AD service specifying that policy checking not be performed during the reconciliation.
- B.** Rerun the identify feed exactly as it was originally run.
- C.** Rerun the identify feed with Use Workflow disabled. Then perform reconciliation against the Tivoli Identity Manager service specifying policy checking.
- D.** Make the AD provisioning policy manual. Rerun the identify feed as it was originally run. Then perform reconciliation against the AD service specifying that policy checking be performed during the reconciliation. Make the AD provisioning policy automatic.
