Our professions endeavor to provide you with the newest information on our C1000-129 exam questions with dedication on a daily basis to ensure that you can catch up with the slight changes of the C1000-129 exam.

Simply put, IBM Security Verify Access V10.0 Deployment sample questions of the real exams are the only thing that can guarantee you are ready for your IBM C1000-129 questions on test day.

#### **NEW QUESTION: 1**

Which two statements about static NAT translations are true? (Choose two.)

- A. They can be configured with access lists, to allow two or more connections to be initiated from the outside.
- B. They are always present in the NAT table.
- C. They require no inside or outside interface markings because addresses are statically defined.
- D. They allow connections to be initiated from the outside.

**Answer: B,D**

#### **NEW QUESTION: 2**

What is a table domain?

- A. Dynamic sets of values based on the values of another object
- B. Dynamic sets of values based on the values in the table window
- C. Static sets of values based on the values of another object
- D. Static sets of values based on the values in the table window

**Answer: A**

#### **NEW QUESTION: 3**

You have an Azure subscription that contains the public load balancers shown in the following table.

You plan to create six virtual machines and to load balancer requests to the virtual machines. Each load balancer will load balance three virtual machines.

You need to create the virtual machines for the planned solution.

How should you create the virtual machines? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1: be created in the same availability set or virtual machine scale set.

The Basic tier is quite restrictive. A load balancer is restricted to a single availability set, virtual machine scale set, or a single machine.

Box 2: be connected to the same virtual network

The Standard tier can span any virtual machine in a single virtual network, including blends of scale sets, availability sets, and machines.
