NEW QUESTION: 1

In a manufacturing plant, the work definition and rate plans of Material, Resource, and Overhead of an assembly have been defined as required.

A cost accountant created different scenarios to represent different manufacturing and cost assumptions and

compare the results. When the cost assumptions are finalized, the cost accountant is expected to publish the

cost scenario to cost accounting.

Identify three process steps that the cost accountant has to perform to transfer the assembly to cost accounting

in frozen type.

A. Publish cost planning scenario to Accounting.

B. Transfer transactions from production to Costing.

C. Build cost planning scenario and perform cost roll up.

D. Create Accounting Distributions.

E. Define a cost planning scenario with Material, Resource, Overhead cost plans, and work definition.

F. Transfer Transactions from Inventory to Costing.

Answer: D,E,F

NEW QUESTION: 2

A distributed object model that has similarities to the Common Object Request Broker Architecture (CORBA) is:

A. The Chinese Wall Model

B. Inference Model

C. Distributed Component Object Model (DCOM)

D. Distributed Data Model

Answer: C

Explanation:

DCOM is the distributed version of COM that supports remote objects as if the objects reside in the clients address space. ACOM client can access a COM object through the use of a pointer to one of the objects interfaces and, then, invoking methods through that pointer. As discussed in Question 24

, CORBA is a distributed object framework developed by the Object Management Group.

*the Chinese Wall Model (D.C. Brewer & M.J. Nash, Chinese Wall Model, Proceedings of the 1989 IEEE Computer Society Symposium on Security and Privacy, pp. 215-228, 1989), uses internal rules to compartmentalize areas in which individuals may work to prevent disclosure of proprietary information and to avoid conflicts of interest. The Chinese Wall model also incorporates the principle of separation of duty.

*Answers Inference Model and Distributed Data Model are distracters.

NEW QUESTION: 3

In the context of AWS CloudFormation, which of the following statements is correct?

A. Actual resource name is the logical resource name.

B. Actual resource name is the stack resource name.

C. Actual resource names are a combination of the resource ID, stack, and logical resource name.

D. Actual resource names are a combination of the stack and logical resource name.

Answer: D

Explanation:

Explanation

In AWS CloudFormation, actual resource names are a combination of the stack and logical resource name.

This allows multiple stacks to be created from a template without fear of name collisions between AWS resources.
