ある会社がゲームプラットフォームを開発しています。ユーザーはチームに参加してオンラインでプレーしたり、選手の統計を含むリーダーボードを見ることができます。このソリューションには、Teamという名前のエンティティが含まれています。

ほとんど変更されないエンティティのデータ操作の効率を向上させるために、Azure Redis Cacheインスタンスを実装する予定です。

チームデータが変更されたときにキャッシュを無効にする必要があります。

どのようにしてコードを完成させるべきですか？回答するには、回答領域で適切なオプションを選択します。

注：それぞれ正しい選択は1ポイントの価値があります。

Answer:

Explanation:

Explanation:

Box 1: IDatabase cache = connection.GetDatabase();

Connection refers to a previously configured ConnectionMultiplexer.

Box 2: cache.SetString("teams",")

To specify the expiration of an item in the cache, use the TimeSpan parameter of StringSet.

cache.SetString("key1", "value1", TimeSpan.FromMinutes(90));

NEW QUESTION: 3

Which of the following security architecture elements also has sniffer functionality? (Select TWO).

- A. HSM

- B. WAP
- C. IPS
- D. SSL accelerator
- E. IDS

Answer: C,E

Explanation:

Sniffer functionality means the ability to capture and analyze the content of data packets as they are transmitted across the network.

IDS and IPS systems perform their functions by capturing and analyzing the content of data packets.

An intrusion detection system (IDS) is a device or software application that monitors network or system activities for malicious activities or policy violations and produces reports to a management station. IDS come in a variety of "flavors" and approach the goal of detecting suspicious traffic in different ways. There are network based (NIDS) and host based (HIDS) intrusion detection systems. Some systems may attempt to stop an intrusion attempt but this is neither required nor expected of a monitoring system. Intrusion detection and prevention systems (IDPS) are primarily focused on identifying possible incidents, logging information about them, and reporting attempts. In addition, organizations use IDPSes for other purposes, such as identifying problems with security policies, documenting existing threats and deterring individuals from violating security policies.

IDPSes have become a necessary addition to the security infrastructure of nearly every organization.

IDPSes typically record information related to observed events, notify security administrators of important observed events and produce reports. Many IDPSes can also respond to a detected threat by attempting to prevent it from succeeding. They use several response techniques, which involve the IDPS stopping the attack itself, changing the security environment (e.g. reconfiguring a firewall) or changing the attack's content.
