- E. Add an OSPF network statement for 192.168.34.0 0.0.0.255 area 1 in R3

Answer: E

Explanation:

Explanation

Based on the network diagram, we know that a virtual link will need to be configured to logically connect area

2 to the back area 0. However, this is not the problem as we can see that R3 has been correctly configured to do this. It is, however, missing the network statement for the link to R4.

Here, we see that the link to R4 is using the 192.168.34.0 network, but that this network has not been added to OSPF

Based on the network diagram, this link should be added to Area 1, not Area 2.
