AzureBatchジョブを作成して実行するためのコードを記述しています。

計算ノードのプールを作成しました。

バッチジョブをバッチサービスに送信するには、適切なクラスとそのメソッドを選択する必要があります。

どの方法を使用する必要がありますか？

- A. CloudJob.Enable(IEnumerable<BatchClientBehavior>)
- B. JobOperations.CreateJob()
- C. JobOperations.EnableJobAsync(String, IEnumerable<BatchClientBehavior>, CancellationToken)
- D. JobOperations.EnableJob(String, IEnumerable<BatchClientBehavior>)
- E. CloudJob.CommitAsync(IEnumerable<BatchClientBehavior>, CancellationToken)

Answer: E

Explanation:

A Batch job is a logical grouping of one or more tasks. A job includes settings common to the tasks, such as priority and the pool to run tasks on. The app uses the BatchClient.JobOperations.CreateJob method to create a job on your pool.

The Commit method submits the job to the Batch service. Initially the job has no tasks.

```
{  
CloudJob job = batchClient.JobOperations.CreateJob();  
job.Id = JobId;  
job.PoolInformation = new PoolInformation { PoolId = PoolId };  
job.Commit();  
}
```

NEW QUESTION: 3

What describes the initial Iteration Plan for the Inception phase?

- A. It is created in the Project Startup Phase.
- B. It focuses on the milestones for the Elaboration Phase.
- C. It is not needed because Inception is a short phase.
- D. It is a static plan, which is set during Bid Transition.

Answer: A

Explanation:

Note:

The overriding goal of the Inception phase is to gain concurrence among all stakeholders on the lifecycle objectives for the project. The Inception phase is critical for all projects because the scope of the effort, the high-level requirements, and the significant risks must be understood before the project can proceed. The Inception phase is used to kick off a project; review the strategic direction of the business; and confirm, document, and prioritize the high-level business requirements for the project.

It is also the time to begin assembling and integrating the project team, to scope the entire engagement, and develop the initial project plan.
