NEW QUESTION: 1
You are using administration console to monitor transactions on a managed server. In the Summary subtab, under the JTA tab, you notice that the total of transactions does not equal the sum of the committed transaction and all of the various rolled back transaction.
How do you explain this?
A. The total count filed includes committed, rolled back, and heuristic completions.
B. The total count includes all transaction since the server was started. The other count only includes the transaction included in the latest transaction log.
C. The total count filed includes in-progress transaction, but the others only show complete transactions.
D. The total count includes distribution and local transactions. The committed count and the various rolled back count are for distributed.
Answer: C

NEW QUESTION: 2
A company is creating an account strategy so that they can begin using AWS. The Security team will provide each team with the permissions they need to follow the principle or least privileged access. Teams would like to keep their resources isolated from other groups, and the Finance team would like each team's resource usage separated for billing purposes.
Which account creation process meets these requirements and allows for changes?
A. Create a master account for billing using Organizations, and create each team's account from that master account. Create a security account for logs and cross-account access. Apply service control policies on each account, and grant the Security team cross-account access to all accounts. Security will create IAM policies for each account to maintain least privilege access.
B. Create a new AWS account, and use AWS Service Catalog to provide teams with the required resources.
Implement a third-party billing to provide the Finance team with the resource use for each team based on tagging. Isolate resources using IAM to avoid account sprawl. Security will control and monitor logs and permissions.

C. Create individual accounts for each team. Assign the security as the master account, and enable consolidated billing for all other accounts. Create a cross-account role for security to manage accounts, and send logs to a bucket in the security account.
D. Create a new AWS Organizations account. Create groups in Active Directory and assign them to roles in AWS to grant federated access. Require each team to tag their resources, and separate bills based on tags. Control access to resources through IAM granting the minimally required privilege.
Answer: C
Explanation:
Explanation
By creating individual IAM users for people accessing your account, you can give each IAM user a unique set of security credentials. You can also grant different permissions to each IAM user. If necessary, you can change or revoke an IAM user's permissions anytime. (If you give out your root user credentials, it can be difficult to revoke them, and it is impossible to restrict their permissions.) References:
