NEW QUESTION: 1

ある組織が、リモートユーザーにIPSec VPNアクセスを実装しました。
次のIPSecモードのどれが、この組織にとって最も安全な実装になるでしょうか。

- A. トンネルモード
- B. 転送モード
- C. AH専用モード
- D. ESP専用モード

Answer: A

Explanation:

In both ESP and AH cases with IPSec Transport mode, the IP header is exposed. The IP header is not exposed in IPSec Tunnel mode.

NEW QUESTION: 2

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

You have five servers that run Microsoft Windows 2012 R2. Each server hosts a Microsoft SQL Server instance. The topology for the environment is shown in the following diagram.

You have an Always On Availability group named AG1. The details for AG1 are shown in the following table.

Instance1 experiences heavy read-write traffic. The instance hosts a database named OperationsMain that is four terabytes (TB) in size. The database has multiple data files and filegroups. One of the filegroups is read_only and is half of the total database size.

Instance4 and Instance5 are not part of AG1. Instance4 is engaged in heavy read-write I/O. Instance5 hosts a database named StagedExternal. A nightly BULK INSERT process loads data into an empty table that has a rowstore clustered index and two nonclustered rowstore

indexes.

You must minimize the growth of the StagedExternal database log file during the BULK INSERT operations and perform point-in-time recovery after the BULK INSERT transaction. Changes made must not interrupt the log backup chain.

You plan to add a new instance named Instance6 to a datacenter that is geographically distant from Site1 and Site2. You must minimize latency between the nodes in AG1.

All databases use the full recovery model. All backups are written to the network location \SQLBackup. A separate process copies backups to an offsite location. You should minimize both the time required to restore the databases and the space required to store backups. The recovery point objective (RPO) for each instance is shown in the following table.

Full backups of OperationsMain take longer than six hours to complete. All SQL Server backups use the keyword COMPRESSION.

You plan to deploy the following solutions to the environment. The solutions will access a database named DB1 that is part of AG1.

* Reporting system: This solution accesses data inDB1with a login that is mapped to a database user that is a member of the db_datareader role. The user has EXECUTE permissions on the database. Queries make no changes to the data. The queries must be load balanced over variable read-only replicas.

* Operations system: This solution accesses data inDB1with a login that is mapped to a database user that is a member of the db_datareader and db_datawriter roles. The user has EXECUTE permissions on the database. Queries from the operations system will perform both DDL and DML operations.

The wait statistics monitoring requirements for the instances are described in the following table.

You need to reduce the amount of time it takes to backup OperationsMain.

What should you do?

- A. Modify the backup script to use the keyword NO_COMPRESSION in the WITH statement.
- B. Modify the full database backups script to stripe the backup across multiple backup files.
- C. Modify the backup script to use the keyword SKIP in the WITH statement
- D. Modify the backup script to use the keyword SKIP in the FILE_SNAPSHOT statement.

Answer: B

Explanation:

Explanation

One of the filegroup is read_only should be as it only need to be backup up once. Partial backups are useful whenever you want to exclude read-only filegroups. A partial backup resembles a full database backup, but a partial backup does not contain all the filegroups. Instead, for a read-write database, a partial backup contains the data in the primary filegroup, every read-write filegroup, and, optionally, one or more read-only files. A partial backup of a read-only database contains only the primary filegroup.

From scenario: Instance1 experiences heavy read-write traffic. The instance hosts a database named OperationsMainthat is four terabytes (TB) in size. The database has multiple data files and filegroups. One of the filegroups is read_only and is half of the total database size.

NEW QUESTION: 3

_____ is the accumulated refundable value of an insurance policy; results from the investment earnings on paid-in insurance premiums.

- A. Cash value
- B. Continuous premium
- C. Decreasing term policy
- D. Nonforefeiture right

Answer: A

NEW QUESTION: 4

Company A has deployed a VCS Control and is attempting to register a third-party endpoint. The engineer has confirmed that no traffic is being blocked for the endpoint and it is receiving a valid IP address. Which option could be the cause of this registration failure?

- A. The VCS Control must be deployed together with VCS Expressway before endpoints can register to either one.
- B. Cisco Unified Communications Manager is required in addition to the VCS Control.
- C. Third-party endpoints are not compatible with VCS Control, only with VCS Expressway.
- D. An incorrect SIP domain is configured on the VCS Control for the endpoint.
