Requirement1: SQL Server: Memory Manager: Total Server Memory (KB)

Requirement2: SQL Server: Memory Manager: Granted Workspace Memory (KB) Specifies the total amount of memory currently granted to executing processes, such as hash, sort, bulk copy, and index creation operations.

Requirement3: Process: working Set

Each time a process is created, it reserves the minimum working set size for the process. The virtual memory manager attempts to keep enough memory for the minimum working set resident when the process is active, but keeps no more than the maximum size.
